

1950's Triang Manual Control Excavator

Sold

Description

A boxed Triang excavator catalogue No. 300 in its original age-worn box. This model was a replica of a full scale machine used for quarrying open cast mining and by moving contractors, the model is unusually sophisticated for a Triang Toy being equipped with eight manual controls and other features such as brakes. The model would benefit from some new strings and is missing one track re-stringing.
