

Edwardian cabochon opal ring

£120

Description

Edwardian 9ct yellow gold three stone blue/black cabochon opal ring

UK Ring Size: N

Blues and black opals are among the rarest and most captivating gemstones in the world. Found primarily in Lightning Ridge, Australia, black opals are prized for their dark body tone, which provides a striking contrast to their vivid flashes of colour-often electric blues, greens, purples, and reds. Blue opals, on the other hand, display a soothing range of sky to ocean-blue hues, sometimes with subtle play-of-colour.

The dark background of black opals enhances their brilliance, making their colours appear more intense and dynamic. These opals symbolise creativity, mystery, and transformation, and their natural beauty continues to fascinate collectors and jewellers alike.
