

Loysels patent coffee percolator

£225

Description

A mid 19th century Loysels patent coffee hydrostatic percolator urn in Adams style Sheffield plate, circa 1850.

Loysel's patented coffee percolator, introduced in the mid-19th century, revolutionised coffee brewing. Invented by Frenchman Louis-Marc-Antoine Loysel, this innovative device utilised steam pressure to force water through coffee grounds, producing a strong, flavourful brew. Unlike traditional brewing methods, it significantly reduced brewing time while enhancing the extraction process.

Loysel's percolator gained widespread acclaim, influencing the development of modern coffee-making technologies. It became a cornerstone in coffee culture, admired for its efficiency, simplicity, and superior results.
